

To whom at the FCC it may concern:

I am an XM Satellite Radio subscriber, and listen to it dutifully as I commute 65 miles one way to work. I listen to CNN, to Broadway, to other pop channels, but the weather channel is particularly helpful to me since I need to know weather from two different zones in my daily commute. I do not yet have traffic for the Atlanta area, but I wait for the day to get channel 227 on XM radio to get that help for traffic in one of the most congested cities in America. Please reject NAB petition 04-160; that gives listeners of all radio broadcasts options...and that's what the USA is all about--options. Please do not take them away.
